TECHNICAL REPORT

CLC/TR 50506-2

RAPPORT TECHNIQUE

TECHNISCHER BERICHT

December 2009

ICS 93.100

English version

**Railway applications -
Communication, signalling and processing systems -
Application Guide for EN 50129 -
Part 2: Safety assurance**

This Technical Report was approved by CENELEC on 2009-07-17.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

CENELEC

European Committee for Electrotechnical Standardization
Comité Européen de Normalisation Electrotechnique
Europäisches Komitee für Elektrotechnische Normung

Central Secretariat: Avenue Marnix 17, B - 1000 Brussels

Foreword

This Technical Report was prepared by SC 9XA, Communication, signalling and processing systems, of Technical Committee CENELEC TC 9X, Electrical and electronic applications for railways.

The text of the draft was submitted to vote in accordance with the Internal Regulations, Part 2, Subclause 11.4.3.3 (simple majority) and was approved by CENELEC as CLC/TR 50506-2 on 2009-07-17.

Contents

	Page
Introduction	5
1 Scope	6
2 References	6
3 Terms, definitions, symbols and abbreviated terms	7
3.1 Terms and definitions	7
3.2 Symbols and abbreviated terms	8
4 Safety design for signalling subsystems	10
4.1 Safety principles	10
4.2 Components development guideline	19
4.3 Specific implementation examples	25
5 Safety case structure in relation with associated documents and activities	28
5.1 Introduction	28
5.2 Safety Case for Signalling Systems	28
5.3 Recommendations regarding the fulfilment of the requirements of tables in EN 50129:2003, Annex E	62
6 Safety assessment and approval	68
6.1 Guidance on the concept of Safety assessment	68
6.2 Migration strategy from other Standards to CENELEC	73
6.3 Approval for modification and internal adaptation	75
Annex A (informative) EN/IEC standards for safety analysis	77
Annex B (informative) Documentation for approval	78
B.1 Introduction	78
B.2 Documentation table structure	79
B.3 Liaison to EN 50129:2003, 5.5.2	79
Annex C (informative) Structure of the System Requirements Specification	87
C.1 Part one – General information	87
C.2 Part two – Requirements	87
Bibliography	89

Table 13 – Typical assessor activity during the life cycle.....	69
Table 14 – Possible Work split Approval for modification	76
Table B.1 – Documentation for Approval.....	80

Introduction

EN 50129 was developed in CENELEC and is now regularly called up in specifications. In essence, it lists factors that influence RAMS (see EN 50126-1) and adopts a broad risk-management approach to safety. EN 50129 is the basic standard for safety related electronic systems for signalling.

Use of EN 50129 has enhanced the general understanding of the issues, but also showed, that items like Safe Design, Safety Documents and Reports, Safety Assessment and Approval, and Cross-Acceptance need further explanation and clarification. Therefore CENELEC decided to address those items in this Application Guideline. The Cross Acceptance is included in CLC/TR 50506-1.

1 Scope

This document is a Technical Report about the basic standard. It is applicable to the same systems and addresses the same audience as the standard itself. It enhances information on specific items on the application of EN 50129. The following items are covered, within the scope of this Application Guideline of EN 50129, as follows:

- Clause 4 deals with identification and mitigation of failures in the concept, specification and design phases. It is mainly dedicated to designers and verifiers and product safety engineers;
- Clause 5 deals with the preparation of a safety case, enhancing points providing the required evidence for safety assessment and approval. It is mainly dedicated to verifiers, validators, safety managers, quality managers and safety engineers;
- Clause 6 deals with the activities an Independent Safety Assessor has to carry out. It is mainly dedicated to safety assessors, safety authorities, safety managers and safety approvals.

In drafting this guidance, it is assumed that the reader is familiar with the basic structure of the standard.

This document does not claim to be exhaustive. It is not a complete compilation of best practices, but only the translation of the knowledge of all the experts of the Working Group in charge of composition of this Application Guideline.

2 References

This Application Guideline uses as basis for specific topics the following reference standards, already mentioned in the main EN 50129.

For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

CLC/TR 50506-1, *Railway applications – Communication, signalling and processing systems – Application Guide for EN 50129 – Part 1: Cross-acceptance*

EN 45004 ¹⁾, *General criteria for the operation of various types of bodies performing inspection*

EN 50121 series, *Railway applications – Electromagnetic compatibility*

EN 50121-4, *Railway applications – Electromagnetic compatibility – Part 4: Emission and immunity of the signalling and telecommunications apparatus*

EN 50124-1, *Railway applications – Insulation coordination – Part 1: Basic requirements – Clearances and creepage distances for all electrical and electronic equipment*

EN 50125-1, *Railway applications – Environmental conditions for equipment – Part 1: Equipment on board rolling stock*

EN 50125-2, *Railway applications – Environmental conditions for equipment – Part 2: Fixed electrical installations*

EN 50125-3, *Railway applications – Environmental conditions for equipment – Part 3: Equipment for signalling and telecommunications*

¹⁾ Superseded by EN ISO/IEC 17020:2004, *General criteria for the operation of various types of bodies performing inspection* (ISO/IEC 17020:1998).
