TECHNICAL REPORT

**CLC/TR 50506-2**

RAPPORT TECHNIQUE

TECHNISCHER BERICHT

December 2009

---

ICS 93.100

English version

**Railway applications -  
Communication, signalling and processing systems -  
Application Guide for EN 50129 -  
Part 2: Safety assurance**

This Technical Report was approved by CENELEC on 2009-07-17.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

**CENELEC**

European Committee for Electrotechnical Standardization  
Comité Européen de Normalisation Electrotechnique  
Europäisches Komitee für Elektrotechnische Normung

**Central Secretariat: Avenue Marnix 17, B - 1000 Brussels**

---

## **Foreword**

This Technical Report was prepared by SC 9XA, Communication, signalling and processing systems, of Technical Committee CENELEC TC 9X, Electrical and electronic applications for railways.

The text of the draft was submitted to vote in accordance with the Internal Regulations, Part 2, Subclause 11.4.3.3 (simple majority) and was approved by CENELEC as CLC/TR 50506-2 on 2009-07-17.

Table 9 – Safety planning and quality assurance activities.....	63
Table 10 – System requirements specification.....	64
Table 11 – Design phase documentation .....	66
Table 12 – Operation and maintenance .....	67
Table 13 – Typical assessor activity during the life cycle.....	69
Table 14 – Possible Work split Approval for modification .....	76
Table B.1 – Documentation for Approval.....	80

## **Introduction**

EN 50129 was developed in CENELEC and is now regularly called up in specifications. In essence, it lists factors that influence RAMS (see EN 50126-1) and adopts a broad risk-management approach to safety. EN 50129 is the basic standard for safety related electronic systems for signalling.

Use of EN 50129 has enhanced the general understanding of the issues, but also showed, that items like Safe Design, Safety Documents and Reports, Safety Assessment and Approval, and Cross-Acceptance need further explanation and clarification. Therefore CENELEC decided to address those items in this Application Guideline. The Cross Acceptance is included in CLC/TR 50506-1.

## 1 Scope

This document is a Technical Report about the basic standard. It is applicable to the same systems and addresses the same audience as the standard itself. It enhances information on specific items on the application of EN 50129. The following items are covered, within the scope of this Application Guideline of EN 50129, as follows:

- Clause 4 deals with identification and mitigation of failures in the concept, specification and design phases. It is mainly dedicated to designers and verifiers and product safety engineers;
- Clause 5 deals with the preparation of a safety case, enhancing points providing the required evidence for safety assessment and approval. It is mainly dedicated to verifiers, validators, safety managers, quality managers and safety engineers;
- Clause 6 deals with the activities an Independent Safety Assessor has to carry out. It is mainly dedicated to safety assessors, safety authorities, safety managers and safety approvals.

In drafting this guidance, it is assumed that the reader is familiar with the basic structure of the standard.

This document does not claim to be exhaustive. It is not a complete compilation of best practices, but only the translation of the knowledge of all the experts of the Working Group in charge of composition of this Application Guideline.

## 2 References

This Application Guideline uses as basis for specific topics the following reference standards, already mentioned in the main EN 50129.

For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
