Foreword

This document (CEN/TR 15473:2007) has been prepared by Technical Committee CEN/TC 308 "Characterization of sludges", the secretariat of which is held by AFNOR.

The status of this document as CEN/TR has been chosen because much of its content is not completely in line with practice and regulations in each member state. This document gives recommendations for good practice concerning the drying of sludges, but existing national regulations remain in force.

Introduction

All the information of this CEN Technical report constitutes a framework for the process of drying sludges.

Various Directives will apply to thermally dried sludge products depending on the use to which they are to be put. These Directives include Directive 86/278/EEC (see [1]) for recycling to land, Directive 1999/31/EC (see [2]) for disposal to landfill and Directive 2000/76/EC (see [3]) for incineration and energy recovery and Directive 94/9 for equipment intended for use in potentially explosive atmospheres (see [4]).

This document should be read in the context of the requirements of these Directives and any other relevant regulations, standards and codes of practice, which may prevail locally within Member States.
