## **Foreword**

This document (CEN/TR 16099:2010) has been prepared by Technical Committee CEN/TC 192 “Fire service equipment”, the secretariat of which is held by BSI.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

## **Introduction**

Primarily this Technical Report is intended for use by the relevant CEN/TC 192 Working Groups when preparing new standards or revising existing ones. The Technical Report may also be of value to fire and rescue services when designing, selecting, operating or maintaining extinguishing equipment and also to other CEN committees or other organisations who may work on related matters.

The aim of this Technical Report, as well as providing a collation of existing water pressures contained in published CEN/TC192 standards, is to assist in working towards preparing more common definitions, values and descriptions within new or revised TC 192 standards and to ensure such definitions are clearer, more consistent and easier for the users of the standards.

**NOTE** Terms and definitions for pressures are given in the relevant EN standards listed in Clause 3. The equivalent definition for the terms within each section may not be identical.
