Textile floor coverings - Determination of the apparent effective thickness of the backing

I.S. EN 1318:2006

Incorporating amendments/corrigenda issued since publication:

EN 1318:2005/AC:2007

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard – national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation - recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

This document replaces:

EN 1318:1996

This document is based on:

EN 1318:2005

EN 1318:1996

Published:

7 December, 2005

22 August, 1997

This document was published under the authority of the NSAI and comes into effect on:
23 March, 2006

This European Standard was approved by CEN on 26 October 2005.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard (EN 1318:2005) has been prepared by Technical Committee CEN/TC 134 “Resilient, textile and laminate floor coverings”, the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2006, and conflicting national standards shall be withdrawn at the latest by June 2006.

This document supersedes EN 1318:1996.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

1 Scope

This European Standard specifies a method for the determination of the apparent effective thickness of the backing of textile floor coverings.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 1957, *Machine -made textile floor coverings — Selection and cutting specimens for physical tests*

ISO 2424:1992, *Textile floor coverings — Vocabulary*

3 Terms and definitions

For the purposes of this European Standard, the following term and definition applies, but see also ISO 2424:1992 for the definition of the terms quoted in Figure A.1.

3.1

apparent effective thickness (ea) of the backing

distance between the lower surface of the backing and the lowest point of the surface of the layer which is immediately above (back coating, primary backing etc. see Annex A) ignoring any reinforcements included in the backing

4 Principle

A transverse cross section of the textile floor covering is examined microscopically and the distance between the upper and lower surfaces of the backing is measured optically, care being taken to ensure that the backing is not compressed in any way.

5 Apparatus

5.1 Optical device with a minimum magnification of $\times 2$, fitted capable of measuring to 0,1 mm accuracy.

5.2 Cutting device to cut the specimens so that the cut edges are clean and rectilinear (for example a press knife or guillotine).

6 Specimens

Take a representative full production width sample of the floor covering in accordance with the method given in ISO 1957.

Select the locations for sampling of three specimens in the form of strips 10 mm to 30 mm wide and 150 mm to 200 mm long, 50 mm from each selvedge with the length of the specimens perpendicular to the direction of manufacture. Attach to the backing a coloured adhesive textile tape carefully choosing the location to ensure the presence of tape on the longitudinal cross-section of the samples. Ensure adhesion by gently pushing the adhesive tape to the backing.
