# Guidelines on durability of geotextiles and geotextile-related products

## S.R. CR ISO 13434:1999

*Incorporating amendments/corrigenda issued since publication:*

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard – national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation - recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

*This document replaces:*

*This document is based on:*  
CR ISO 13434:1998

*Published:*  
15 December, 1998

This document was published under the authority of the NSAI and comes into effect on:  
21 September, 2011

ICS number:  
59.080

**Guidelines on durability of geotextiles and geotextile-related products**

This CEN Report was approved by CEN on 3 September 1998. It has been drawn up by the Technical Committee CEN/TC 189.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

EUROPEAN COMMITTEE FOR STANDARDIZATION  
COMITÉ EUROPÉEN DE NORMALISATION  
EUROPÄISCHES KOMITEE FÜR NORMUNG

**Central Secretariat: rue de Stassart, 36 B-1050 Brussels**

## **Foreword**

This draft CEN Technical Report has been prepared by CEN/TC 189 "Geotextiles and geotextile-related products" the secretariat of which is held by IBN. It is now submitted to the CEN/BT for approval.

## 1 Scope

This guide is intended to introduce the reader to the basic concepts of geotextiles durability and its assessment. Consideration of the design parameters, the project conditions and the geotextile properties leads to the definition of the appropriate tests to be performed for assessing the durability of the geotextile .

Geotextiles and geotextile-related products (referred to below as geotextiles) are available in a wide range of compositions appropriate to different applications and environments. The synthetic polymers used consist mainly of polyamide, polyester, polyethylene and polypropylene. These materials, when correctly processed and stabilised, are resistant to chemical and microbiological attack encountered in normal soil environments and for normal design lives. For such applications only a minimum number of screening or "index" tests are necessary.

For applications in more severe environments such as soil treated with lime or cement, landfills or industrial waste, or for applications with particularly long design lives, special tests including "performance" tests with site-specific parameters may be required.

This guide does not cover products designed to survive for a limited time, such as erosion control fabric based on natural fibres, nor does it cover geomembranes, nor geotextiles for asphalt reinforcement. Creep and creep-rupture, which should be taken into consideration for soil reinforcement applications, are described in outline but the use of the data in reinforced soil design will be the subject of a separate document.
