Standard Recommendation  
S.R. CR 12172:1995

# Numerical designation systems for metallic materials - Review of existing systems and recommendation for new systems

## S.R. CR 12172:1995

*Incorporating amendments/corrigenda issued since publication:*

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard – national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation - recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

<i>This document replaces:</i>	<i>This document is based on:</i> CR 12172:1995	<i>Published:</i> 1 October, 1995
This document was published under the authority of the NSAI and comes into effect on: 15 August, 2010		ICS number: 77.020

Numerical designation systems for metallic  
materials - Review of existing systems and  
recommendation for new systems

This CEN REPORT has been prepared by Technical Committee CEN/CS and has been approved by CEN on 1994-10-14.

CEN members are the national standards bodies of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, United Kingdom.

## **Contents**

### **Foreword**

### **Introduction**

- 1 Scope**
- 2 References**
- 3 Principal European numerical designation systems now in place**
  - 3.1 Numbering systems other than for aerospace materials**
    - 3.1.1 Steel**
    - 3.1.2 Aluminium**
    - 3.1.3 Magnesium**
    - 3.1.4 Copper**
    - 3.1.5 Cast iron**
  - 3.2 Designations used in EN aerospace Standards**
    - 3.2.1 First group**
    - 3.2.2 Second group**
    - 3.2.3 Third group**
      - 3.2.3.1 Aluminium and Aluminium Alloys**
      - 3.2.3.2 Other metals**
- 4 Recommendations for a general pattern for European numerical metals designations with the exception of aerospace series**
  - 4.1 Principles**
  - 4.2 Number of characters**

# **Numerical designation systems for metallic materials. Review of existing systems and recommendations for new systems**

## **Foreword**

This CEN Report was prepared by the CEN/BT/WG79 and agreed at its meeting on 1994.06.08 and adopted by the CEN/BT on 1994-10-14.

Based on a resolution of CEN/BT, July 28 1993, (BT 134/1993), CEN/BT/WG79 was established to examine the question of the coordination of material designations etc.

CEN/BT/WG79 had its first meeting 1993-10-08 in Brussels, where they recommended the following to CEN/BT:

“Having regard to the cost, time and disruption to industry it was agreed that the designation systems already in place, i.e adopted European Standards or in an advanced stage of preparation cannot be changed except as determined by the technical committee concerned.

In order that purchasers of materials have a good understanding of the various numerical designation systems, a CEN-report should be prepared setting out the principles of those designation systems for metallic materials already in place, i.e. adopted European standards and those in an advanced stage of preparation.

The CEN-Report should include a recommendation for a general pattern based on the existing systems and which should be used when considering designation systems for new standardized materials.”

At its meeting 1993-10-26/28 in Brussels, CEN/BT requested that WG79 should prepare a CEN-Report according to its recommendation.

## **Introduction**

In order to identify metallic materials it is necessary to have short designations for ordering, instructions, inspection documents, information in drawings etc. Technical committees therefore have defined designation systems and part of this designation is the material designation.

Generally those systems are separated in two different types, name (symbol) systems and numbering systems.

Name (symbol) systems are used as an abbreviated identification of the material and gives an identification of application, composition and properties depending on the material. Name (symbol) systems are normally an alternative system to the numbering systems and their use is at the discretion of the user.

Numbering systems are established in order to get as far as possible a restricted number of digits which make them suitable for computerization.

This will give no information directly as to which type of grade, alloying elements etc. which are present. Numbering systems may include both figures and letters. In fact letters will give greater capacity in the system and is of no disadvantage for computerization.

Some purchasers of materials especially those who use different types of materials such as steel, cast iron, aluminium, copper, plastics, etc, have expressed need for a uniform pattern with similar designations for different types of material. Such a pattern should also be suitable for computerization and should also simplify designations used in drawings, purchasing documents etc.

This CEN Report deals only with numbering systems.

## 1 Scope

This CEN Report gives the principles of numerical designation systems for metallic materials already in place and which are falling into a general pattern and gives recommendations for how this general pattern should be used when evaluating designation systems for new metals to be standardized.

For a general pattern it is not necessary to describe in detail the structure of numerical designations for different grades and conditions. This task is the responsibility of the technical committee concerned, and is normally defined in a European Standard.

## 2 References

This CEN Report refers to a number of documents. Their references are cited at the appropriate places in the text and the publications are listed as follows.

EN 515	Aluminium and aluminium alloys - Wrought products - Temper designations
prEN 1780-1	Aluminium and aluminium alloys - Designation of unalloyed and alloyed aluminium ingots for remelting, master alloys and castings - Part 1: Numerical designation system
EN 1173*)	Copper and copper alloys - Material condition or temper designation
EN 1412*)	Copper and copper alloys - European numbering system
EN 2032-1	Aerospace series - Metallic materials - Part 1: Designation
EN 10027-2	Designation system for steel - Numerical system
EN...*)	Aluminium and aluminium alloys - Designation of unalloyed and alloyed aluminium ingots for remelting, master alloys and castings - Part 1: Numerical designation system (00132068)

\*) In course of preparation
