Connections for heating and cooling appliances - Detachable connection with outside threaded pipe G 3/4 A and inside cone

I.S. EN 16313:2013

Incorporating amendments/corrigenda/National Annexes issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard – national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation - recommendation based on the consensus of an expert panel and subject to public consultation.

SWIFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

EUROPEAN STANDARD

EN 16313

NORME EUROPÉENNE

EUROPÄISCHE NORM

May 2013

ICS 91.140.10

English Version

Connections for heating and cooling appliances - Detachable connection with outside threaded pipe G 3/4 A and inside cone

Raccords pour appareils de chauffage et de refroidissement - Raccords démontables à filetage extérieur cylindrique G 3/4 A et cône intérieur

Anschlüsse für Heiz- und Kühlsysteme - Lösbare Verbindung mit Rohraußengewinde G 3/4 A und Innenkonus

This European Standard was approved by CEN on 11 April 2013.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

This document (EN 16313:2013) has been prepared by Technical Committee CEN/TC 130 “Space heating appliances without integral heat sources”, the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2013, and conflicting national standards shall be withdrawn at the latest by November 2013.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

On the market, a series of geometries (outside threaded pipe G $\frac{3}{4}$ A with inside cone and counter geometries), e.g. under the designation “eurocone”, is commonly used. These geometries, however, are compatible with each other only to a limited degree. Therefore, this European Standard is intended to achieve a unification of detachable connections with outside threaded pipe G $\frac{3}{4}$ A and inside cone.

Significant known applications are:

- connection geometries of radiators with integrated valves;
- connection geometries of connection fittings and bypass connection fittings on radiators with integrated valves;
- connection geometries of ascension pipe valves for standard radiators;
- connection geometries of heating circuit distributors to underfloor heatings and radiator connection systems;
- interface between radiator nipple and thermostatic valve or lockshield valve.

Detachable connections with the outside threaded pipe G $\frac{3}{4}$ A are normally made of metallic materials. Further variants are possible.

So far, the designation “eurocone” has conveyed the impression that there is a standardised geometry. However, this is not the case, i.e. the screw in or thread lengths, the cone angles and diameters, as well as the diameter of the inner cylinder differ frequently. Furthermore, the following variants are commonly used:

- spherical or tapered cone;
- cones with and without inserted sealing material;
- sealing principles inside the cylindrical part of the geometry comprising O rings;
- O rings within the slope of the cone (O rings offered by different providers are designed for different press fits); and
- sealings without additional sealing material (metallic sealing).
