This European Standard was approved by CEN on 4 December 2009 and includes Amendment 1 approved by CEN on 29 November 2011.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

This document (EN 15649-4:2010+A1:2012) has been prepared by Technical Committee CEN/TC 136 "Sports, playground and other recreational facilities and equipment", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2012, and conflicting national standards shall be withdrawn at the latest by July 2012.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

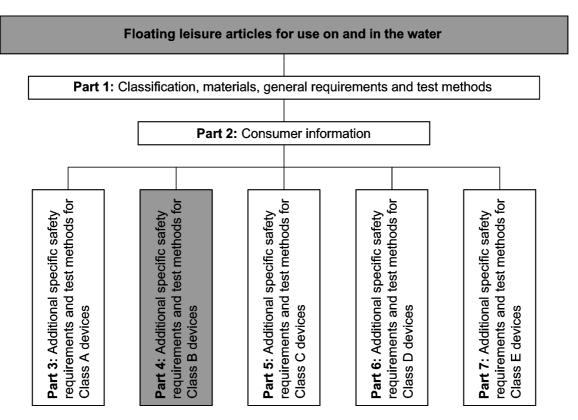

This document includes Amendment 1, approved by CEN on 2011-11-29.

This document supersedes EN 15649-4:2010.

The start and finish of text introduced or altered by amendment is indicated in the text by tags \mathbb{A}_1 \mathbb{A}_1 .

This document has been prepared under mandate given to CEN by the European Commission.

This European Standard is one of a series consisting of seven standards dealing with floating leisure articles for use on and in the water.

Compliance of a product to this standard requires that the relevant specific part and additionally the EN 15649-1 and EN 15649-2 are met. If a product includes multiple use related to several classes it should meet the requirements of all these classes.

EN 15649-4:2010+A1:2012 (E)

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

EN 15649-4:2010+A1:2012 (E)

Introduction

Class B devices are marketed and used for the purpose of activities in the water. In distinction to other floating devices they are characterised by a typically partly immersed position of the user inside the device.

In case of Class B1 products, i.e. the swim seat for children above three years of age (36 months), user's position might be such that in case of very young users (non swimmers four years and above) the body is kept afloat und laterally supported by a surrounding inflatable structure which provides a relatively tight fit between user and buoyant structure. This in turn incorporates the potential risk of body entrapment in case of a capsizing.

Class B1-type products for children below three years of age (36 months) are dealt with in EN 13138-3.

The development of new products in this area is progressing. Beyond the classical swim seat rafts for more dynamic action on and in the water different body postures and extended user groups have been developed.

Class B2 products do not provide this kind of support to the user. Even if they have the circumferential buoyant structure in common with the Class B1 products — and thus the entrapment risk if this fit becomes too tight — flotation of the user depends on his ability to hold himself by hands or body inside the very loosely surrounding buoyant structure.

Both classes of products include also adult use. Activities may reach from passive floating to actions like wave surfing, tubing, balancing, swinging, etc. The devices are linked with the identified risks given in Table 1.

Standardisation is aiming for more safety with regard to all foreseeable uses.

Dealing with a partly intentionally immersed human body leads to the question of loads to be applied for appropriate testing. For the purpose of this standard load resulting from the body weight are set with 75 % of the body weight of the heaviest foreseeable or specified user even when in certain circumstances this immersed body weight may be reduced to roughly 10 %. In cases where the devices can be used for sitting on top (e.g. big rings) the maximum body weight out of the stipulated user group should be applied.

It should be noted that this standard is not related to the one and only technically clearly determined product but to a whole diverse product group including two major design principles B1 and B2 as laid down in the classification, see Clause 4, for Class B floating leisure articles.

Children testing

It goes without saying that any involvement of human test subjects and thus in particular child testing is accompanied with all necessary precautions, surveillance and safety measures.

This standard refers amongst others to children as test subjects. The anthropometric requirements related to these test subjects are based on children five years and nine years of age with a body height of 126 cm and 149 cm and a body weight of 25 kg/38 kg. Children of 14 years of age and above can be represented by the smallest adult female person representing the fifth percentile of the anthropometric range.

EN 15649-4:2010+A1:2012 (E)

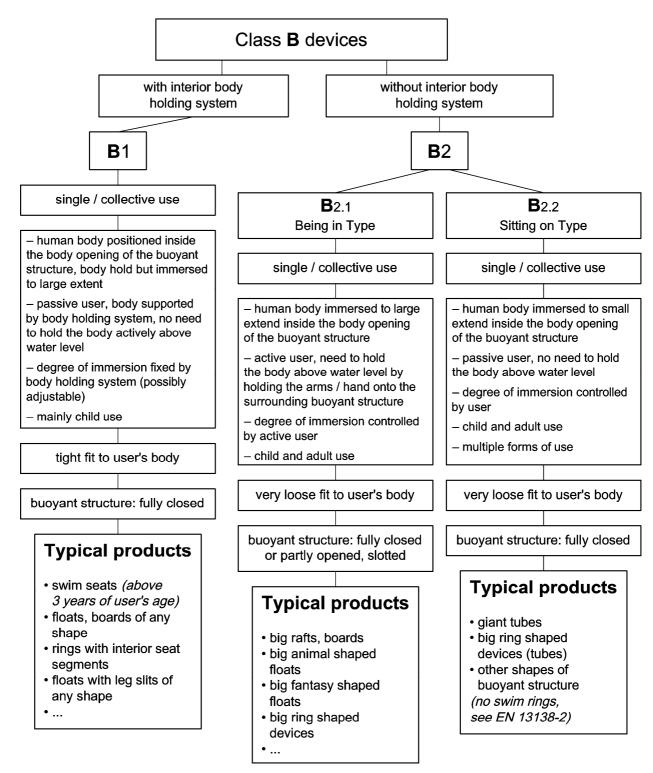

In order to provide in all cases an alternative to child testing the anthropometric data of relevant manikins are specified for optional application in Annex A.

Table 1 — Introductory risk analysis

No.	Typical products	Place of use	Function; range of usage; target/age group	Type of movement/ propulsion	Position of user in regard to the equipment, elevation above water	Predict- able mis- use	Partial risk related to water environ- ment	Fi- nal risk	Protection aims standard/ regulation
B (B1, B2)	floating struc- tures with circum- ferential buoy- ancy cham- bers around user's body, body opening with or without interior body holding system, various body postures	depending on age group and capability to swim: pool, close to shore, lake, pond	age and use (max. 16 years to	mainly drift- ing; propul- sion only by swimming strokes; third party acting, moving by hand pad- dling, action in waves for adolescents	in-water position; main parts of body are below the water sur- face; no elevation above water level, sitting kneeling, stand- ing, laying	dangerous distance from bank/ shore; use in currents and/or dangerous offshore winds; use by non- swimmers (B2); cap- sizing (B1); wrong size allocation (user wedged in device); lack of su- pervision	Capsizing, entrapment, entangle-ment; capsizing in combination with entrapment can lead to fatal accidents; drifting away through currant or wind	DROWNING	avoidance of entrapment/ entangle- ment; float- ing stability; residual buoyancy; warning notes; easy escape in the case of capsizing; adult super- vision; suit- able sizing system

Interior Structure Class B

(A₁

NOTE 1 Rings and ring shaped tubes dealt with in this standard are in no case swim rings as means to learn to swim (see EN 13138-2) but water leisure articles for hanging in or sitting on.

NOTE 2 The minimum length or width is 1,2 m and the corresponding dimension is \geq 1,2 m.

EN 15649-4:2010+A1:2012 (E)

1 Scope

This European Standard specifies safety requirements and test methods related to materials, safety, performance and consumer information for classified floating leisure articles for use on and in the water according to EN 15649-1.

This document is applicable with EN 15649-1 and EN 15649-2.

This European Standard is applicable for Class B floating leisure articles for use on and in the water according to EN 15649-1 regardless whether the buoyancy is achieved by inflation or inherent buoyant material.

Class B devices provide a buoyant structure with one or more body openings into which the user is positioned partly immersed.

NOTE 1 Typical products forming Class B (see Annex B):

- floating rafts with interior body holding system ("swim seats") mostly in circular or square shape, fantasy shape for playing purposes;
- floating fantasy shaped [A] deleted text [A] structures with one or more openings to host a child's body, with or without body holding system;
- floating with slits or openings to put legs through any shape A deleted text A;
- floating rings with interior seat segments inside the circular body opening.

NOTE 2 Typical places for application:

- pools;
- protected areas of lakes, ponds;
- protected area sea shore (no offshore winds, no currents).

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 13138-3:2007, Buoyant aids for swimming instruction — Part 3: Safety requirements and test methods for swim seats to be worn

EN 15649-1:2009+A1:2012 (A), Floating leisure articles for use on and in the water — Part 1: Classification, materials, general requirements and test methods

EN 15649-2, Floating leisure articles for use on or in the water — Part 2: Consumer information

3 Terms and definitions

For the purposes of this document, the terms and definitions given in [A] EN 15649-1:2009+A1:2012 [A] and the following apply.
