# Communication systems for meters - Part 1: Data exchange

**I.S. EN 13757-1:2014**

*Incorporating amendments/corrigenda/National Annexes issued since publication:*

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard — national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation — recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

*This document replaces/revises/consolidates the NSAI adoption of the document(s) indicated on the CEN/CENELEC cover/Foreword and the following National document(s):*

*NOTE: The date of any NSAI previous adoption may not match the date of its original CEN/CENELEC document.*

*This document is based on:*

EN 13757-1:2014

*Published:*

2014-10-29

*This document was published under the authority of the NSAI and comes into effect on:*

2014-11-26

## Communication systems for meters - Part 1: Data exchange

Systèmes de communication et de télérelevé de compteurs  
- Partie 1 : Echange de données

Kommunikationssysteme für Zähler - Teil 1:  
Datenaustausch

This European Standard was approved by CEN on 30 August 2014.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## Foreword

This document (EN 13757-1:2014) has been prepared by Technical Committee CEN/TC 294 “Communication systems for meters and remote reading of meters”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2015, and conflicting national standards shall be withdrawn at the latest by April 2015.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 13757-1:2002.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association.

This document has been revised in order to reflect the 7 – layer OSI model, significant updates in Security practices, and updates to the OBIS model to reflect the state of the art.

EN 13757 comprises the following parts:

- *Part 1: Data exchange* [the present document];
- *Part 2: Physical and link layer*;
- *Part 3: Dedicated application layer*;
- *Part 4: Wireless meter readout (Radio meter reading for operation in SRD bands)*;
- *Part 5: Wireless relaying*;
- *Part 6: Local Bus*.

This document is referred to in the CEN/CLC/ETSI TR 50572:2011, *Functional Reference Architecture for Communications in Smart Metering Systems*, as a standard for communications between elements in the Smart Metering Architecture. The M/441 Mandate, which led to the CEN/CLC/ETSI TR 50572, is driving significant development of standards in smart metering.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

**EN 13757-1:2014 (E)****Introduction**

There are a number of other activities taking place in the smart metering and smart grid environment. The reader's attention is drawn to M/490, the mandate for standardization for smart grid, available from [http://ec.europa.eu/energy/gas\\_electricity/smartgrids/doc/2011\\_03\\_01\\_mandate\\_m490\\_en.pdf](http://ec.europa.eu/energy/gas_electricity/smartgrids/doc/2011_03_01_mandate_m490_en.pdf), and C(2012) 1342, "Guidelines for conducting a cost-benefit analysis of Smart Grid projects", available from [http://ec.europa.eu/energy/gas\\_electricity/smartgrids/doc/20120427\\_smartgrids\\_guideline.pdf](http://ec.europa.eu/energy/gas_electricity/smartgrids/doc/20120427_smartgrids_guideline.pdf).

This document describes the data exchange and communications for meters and remote reading of meters in a generic way. It is Part 1 of EN 13757.

The main use of EN 13757-1 is to provide an overview of the protocols at the different levels and to provide a specification for the DLMS/COSEM application Layer for meters.

Additional parts to the series of standard EN 13757 are:

- *Part 2: Physical and link layer;*
- *Part 3: Dedicated application layer;*
- *Part 4: Wireless meter readout (radio meter reading for operation in SRD bands);*
- *Part 5: Wireless relaying;*
- *Part 6: Local Bus.*

The world of metering is going through a period of rapid change, and it is anticipated that this and other parts of the standard will require amendment in a short period of time.

NOTE 1 This document makes reference to EN 62056 standards repeatedly. An exercise is taking place to reissue and renumber these standards, and it is anticipated that CEN-listed versions of these standards will be confirmed shortly. References to older versions of these standards will be comprehensively updated as part of the response to comments to this draft.

NOTE 2 Some of the ISO/IEC documents listed under Clause 2 may be available only from ISO or IEC directly. If the document you require is not available from your national standards organization, it is recommended that you contact ISO or IEC to establish the status of the document and its availability. ISO can be contacted via [www.iso.org](http://www.iso.org).

NOTE 3 Clause 3 contains the terms and definitions special to remote reading of meters. Annex B is used to explain terms related to the object oriented model used in COSEM, detailed in EN 62056-6-2 and OBIS, detailed in EN 62056-6-1.

## 1 Scope

This European Standard specifies data exchange and communications for meters and remote reading of meters in a generic way.

This European Standard establishes a protocol specification for the Application Layer for meters and establishes several protocols for meter communications which may be applied depending on the application being fulfilled.

NOTE Electricity meters are not covered by this standard, as the standardization of remote readout of electricity meters is a task for CENELEC.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
