Irish Standard
I.S. EN 50132-5-3:2012

Alarm systems - CCTV surveillance systems for use in security applications -- Part 5-3: Video transmission - Analogue and digital video transmission

I.S. EN 50132-5-3:2012

Incorporating amendments/corrigenda issued since publication:

The National Standards Authority of Ireland (NSAI) produces the following categories of formal documents:

I.S. xxx: Irish Standard – national specification based on the consensus of an expert panel and subject to public consultation.

S.R. xxx: Standard Recommendation - recommendation based on the consensus of an expert panel and subject to public consultation.

SWiFT xxx: A rapidly developed recommendatory document based on the consensus of the participants of an NSAI workshop.

<i>This document replaces:</i> EN 50132-5:2001 (partially)	<i>This document is based on:</i> EN 50132-5-3:2012	<i>Published:</i> 29 June, 2012
This document was published under the authority of the NSAI and comes into effect on: 3 July, 2012		ICS number: 13.310 33.160.40

Analoge und digitale Videoübertragung

This European Standard was approved by CENELEC on 2012-05-15. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Foreword

This document (EN 50132-5-3:2012) has been prepared by CLC/TC 79, "Alarm systems".

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2013-05-15
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2015-05-15

This document, together with EN 50132-5-1:2011 and EN 50132-5-2:2011, supersedes EN 50132-5:2001.

This document is a revision of the former video transmission standard EN 50132-5:2001 with only one additional new Clause 9, 'High resolution video interface standards & transmission requirements'.

EN 50132 consists of the following parts, under the general title "*Alarm systems – CCTV surveillance systems for use in security applications*":

- Part 1: System requirements;
- Part 5-1: Video transmission – General video transmission performance requirements;
- Part 5-2: Video transmission – IP video transmission protocols;
- Part 5-3: Video transmission – Analogue and digital video transmission;
- Part 7: Application guidelines.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

Introduction

The European Electrotechnical Standardisation Organisation for Alarm Systems together with many governmental organisations, test houses and equipment manufacturers has defined a common framework for Surveillance Video Transmission in order to achieve interoperability between products.

EN 50132-5 is divided into 3 independent subparts:

- Part 5-1: Video transmission – General video transmission performance requirements;
- Part 5-2: Video transmission – IP video transmission protocols;
- Part 5-3: Video transmission – Analogue and digital video transmission.

Each subpart offers its own (sub)clauses on scope, references, definitions, requirements.

1 Scope

The purpose of the transmission system in a closed circuit television (CCTV) installation is to provide reliable transmission of video signals between the various CCTV equipments in security, safety and monitoring applications.

Along with high-resolution video interfaces and transmission, the analogue video signals are still in use today for video transmission and offer interlaced scanning and the film aspect ratio of 4:3.

The complexity of a video transmission system varies in accordance with the requirements of the installation.

Examples of the different types of video transmission systems covered by this European Standard are as follows:

a) using dedicated cable transmission media:

- coaxial cable;
- twisted pair cable;
- fibre optic cable;

b) using wireless transmission methods:

- microwave;
- infrared;
- radio transmission;

NOTE 1 These transmission methods apply to non-compressed video signals.

NOTE 2 Multiple analogue video signals may be combined in one physical transmission path using multiplexing techniques.

c) using analogue high-resolution video interfaces:

- VESA and VGA;

d) using digital uncompressed high-resolution video interfaces:

- HDMI;
- DVI.

This European Standard specifies the minimum requirements for the specification and testing of the performance of a video transmission channel involving transmitter, receiver or intermediate devices associated with the selected transmission media, for use in CCTV surveillance systems.

Video transmission equipment may be combined with additional functions, e.g. for audio or data transmission. These functions are not included in this European Standard.

This European Standard covers the transmission of colour and black and white video signals in accordance with the former CCIR Report 624-4, 625 lines, 50 fields per second and today ITU-R Report BT.624-4.

IP based video transmission is covered in EN 50132-5-1 and EN 50132-5-2.

3 Terms, definitions and abbreviations

3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1.1

analogue

continuous electrical signal that carries information in the form of variable physical values, such as amplitude or frequency modulation and that moves through a continuous range of settings or levels

3.1.2

analogue components

video signals in which a continuously variable voltage or current (rather than a set of digital numbers) represents a pixel
